AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at page 14, line 20, and ending on page 15, line 10, with the following amended paragraph:

Fig. 8 is a flowchart of the second decision means (S104 in Fig. 4). First, a variable i is reset to one for initialization (S1046), wherein i has a value of 1, 2, ..., n. Next, as to the input image data of i-th pixel, it is decided whether R-G, G-B and R-B satisfy following conditions (S1047).

$$R - Gmin \le Ri - Gi \le R - Gmax,$$

 $G - Bmin \le Gi - Bi \le G - Bmax,$ (3)

and

$$R - Bmin \le Ri - Bi \le R - Bmax$$
.

If these conditions are <u>not</u> satisfied, the i-th pixel is deleted from the specified color candidates as noise (S1048). Next, i is incremented (S1049), and if the data processing have not yet been completed on all the pixels (NO at step S1050), the flow returns to step S1047 to repeat the above-mentioned steps.
